CLINICAL HISTORY: rib pain ASSOCIATED DIAGNOSIS: Rib pain ORDERING PROVIDER: DANIEL CHAGIN

TECHNOLOGISTS NOTE: No known injury. C/O pain left lower ribs.

COMPARISON: 2/27/2019, outside report of CT chest from 4/6/2023

#### FINDINGS:

No fracture, dislocation, lytic or blastic lesion is seen. Nondisplaced fractures may not be radiographically visible until callus forms. Of greater significance, no hemothorax or pneumothorax is observed. The cardiovascular silhouette is normal in size. The lungs are clear. There are are multiple areas of pleural thickening bilaterally, most notably in the left and right mid hemithoraces, similar to prior; outside CT chest report notes multiple areas of pleural-parenchymal scarring. The soft tissues are within normal limits.

#### IMPRESSION:

No visible left rib fracture or pneumothorax.

EXAMINATION: CT ABD/PELVIS ED I/V PROTO W/ CONTRAST 12/08/2022 11:08 PM

CLINICAL HISTORY: Reason for Exam: LUQ pain; LUQ tenderness; Pyelonephritis suspected; Left flank tenderness, thrombocytopenia, history of renal stone.

COMPARISON: CT ABD/PELVIS ED I/V PROTO W/ 5/4/2021, 10:23 PM

TECHNIQUE: Contiguous axial images were obtained through the abdomen and pelvis from the level of the diaphragmatic domes through the pubic symphysis following bolus administration of intravenous contrast. MPR sagittal and coronal reconstructions were obtained from the axial data. Before infusion of intravenous contrast, radiology personnel investigated the possibility of an allergic history and of any history of reaction to iodinated contrast material. Contrast Protocol: Omnipaque 350 [>or =100lb] 100 ml [<100 lb] 1 ml per 1 lb.

(Series 2, Image 16) INTRA-PROCEDURE MEDS: iohexol (OMNIPAQUE) 350 MG/ML injection 100 mL Route: Intravenous Push

#### FINDINGS:

Included images of the lower thorax: No focal lung consolidation or pleural effusion.

Hepatobiliary: No focal suspicious lesion. There is focal steatosis along the falciform ligament. No biliary dilation evident.

Pancreas: Unremarkable

Spleen: Borderline enlarged spleen measuring up to 12.8 cm.

Adrenal Glands: Unremarkable

Kidneys, ureters, and bladder: Tiny nonobstructive right upper pole renal calculus. No hydroureteronephrosis. Urinary bladder is decompressed.

Abdominal and pelvic vasculature: Unremarkable

GI tract: No evidence of obstruction. The appendix is within normal limits. Small hiatal hernia.

Peritoneum and retroperitoneum: No free fluid or free air.

Lymph Nodes: No abdominal or pelvic lymphadenopathy.

Prostate and seminal vesicles: Limited evaluation by technique.

Visualized musculoskeletal structures: No acute fracture or destructive osseous lesion. Multilevel schmorl's nodes.

#### IMPRESSION:

- 1. No acute process identified.
- 2. Tiny nonobstructive right renal calculus.
- 3. Small hiatal hernia.
- 4. Borderline enlarged spleen.

MACRO: None

Narrative

05/05/2021 4:37 AM EDT

EXAMINATION: CT ABD/PELVIS ED I/V PROTO W/ED

CLINICAL HISTORY: pain

COMPARISON: CT renal stone 9/29/2020.

TECHNIQUE: Contiguous axial images were obtained through the abdomen and pelvis from the level of the diaphragmatic domes through the pubic symphysis following bolus administration of intravenous contrast. MPR sagittal and coronal reconstructions were obtained from the axial data. Before infusion of intravenous contrast, radiology personnel investigated the possibility of an allergic history and of any history of reaction to iodinated contrast material. Contrast Protocol: Omnipaque 350 [>or =100lb] 100 ml [<100 lb] 1 ml per 1 lb.

#### INTRA-PROCEDURE MEDS:

Contrast Agent Omnipaque350 100ml Bottle 100 milliliter 05/04/2021 INTRAVENOUS

#### FINDINGS:

Included images of the lower thorax: Minimal bibasilar opacities suggestive of atelectasis.

Hepatobiliary: Unremarkable liver without biliary dilation evident. Gallbladder is contracted.

Pancreas: Unremarkable

Spleen: Unremarkable

Adrenal Glands: Unremarkable

Kidneys, ureters, and bladder: Redemonstration of bilateral subcentimeter low-attenuation lesions, too small to characterize but likely benign. Stable punctate calculus in the right upper pole (2:39). No left nephrolithiasis. No hydroureteronephrosis.

Abdominal and pelvic vasculature: Unremarkable

GI tract: Small hiatal hernia. No bowel wall thickening or dilation. No evidence of obstruction. The appendix is within normal limits.

Peritoneum and retroperitoneum: No free fluid or free air is noted.

Lymph Nodes: No abdominal or pelvic lymphadenopathy is evident.

Prostate and seminal vesicles: Unremarkable

Visualized musculoskeletal structures: No acute fracture or destructive osseous lesion is identified. Chronic bilateral L5 pars defects. Redemonstration of multilevel Schmorl's nodes in the thoracolumbar spine. Small fat-containing umbilical hernia.

## IMPRESSION:

1. No acute process in the abdomen or pelvis.

2. Stable punctate right nephrolithiasis. No hydronephrosis.

MACRO: None Phantom

I have reviewed the study and interpretation with the resident and agree with the findings.

## Narrative

11/04/2020 3:58 PM EST

EXAMINATION: XR ABDOMEN 1 VIEW APSTAT

CLINICAL HISTORY: pain; Addl Inst: llleft flank pain

TECHNOLOGISTS NOTE: Left flank pain, Hx of recent kidney stone on

right side. Pt states recent prostate scrapping procedure.

COMPARISON: September 29, 2020

#### FINDINGS:

Supine imaging precludes evaluation for free air.

Stable pelvic calcifications, likely vascular/phlebolith in etiology. Evaluation for renal calculus is not optimal given overlapping bowel gas shadowing. Nonspecific gaseous distention of the bowel. No evidence of obstruction.

The lung bases are clear.

#### **IMPRESSION:**

- 1. No obvious urolithiasis, but this is limited due to overlapping gas shadows.
- 2. Nonspecific nonobstructive bowel gas pattern.

MACRO: None

EXAMINATION: CT RENAL STONE

CLINICAL HISTORY: Flank pain, right

TECHNOLOGISTS NOTE: COMPARISON: None

TECHNIQUE: CT Abdomen and Pelvis without contrast performed for renal stone protocol. Contiguous unenhanced axial images were obtained from

above the kidneys through the level of the pubic symphysis. 2D sagittal and coronal reconstructions were obtained from the axial

data.

## FINDINGS:

Included images of the lower thorax: No focal lung consolidation or pleural effusion.

Hepatobiliary: Unremarkable liver without biliary dilation evident.

Pancreas: Unremarkable

Spleen: Unremarkable

Adrenal Glands: Unremarkable

Kidneys, ureters, and bladder: 1 mm nonobstructing renal calculus in the right superior pole. No left renal stone identified. No hydroureteronephrosis. There is circumferential bladder wall thickening likely related to incomplete distention.

Abdominal and pelvic vasculature: Unremarkable

 ${\sf GI}$  tract: Small sliding hiatal hernia. No evidence of obstruction. The appendix is within normal limits.

Peritoneum and retroperitoneum: No free fluid or free air is noted.

Lymph Nodes: No abdominal or pelvic lymphadenopathy is evident.

Prostate and seminal vesicles: Unremarkable

Visualized musculoskeletal structures: No acute fracture or destructive osseous lesion is identified. Chronic bilateral L5 pars defects are present without significant listhesis.

### IMPRESSION:

1. Tiny nonobstructing renal calculus in the superior pole of the right kidney.

MACRO: None Phantom

I have reviewed the study and interpretation with the resident and agree with the findings.

CLINICAL HISTORY: pain

TECHNOLOGISTS NOTE: FLANK PAIN

COMPARISON: None

#### FINDINGS:

AP supine views of the abdomen were performed. There is a large amount of colonic fecal residue. Mild gaseous distention of the stomach and transverse colon is noted. No obvious renal or ureteral calculi are noted although evaluation is limited due to the large amount of fecal residue. The lung bases are clear. No acute osseous process is visualized. Multiple pelvic phleboliths are seen.

## IMPRESSION:

1. No obvious urolithiasis given the limitations.

2. Large amount of colonic fecal residue with nonspecific gaseous distention of the stomach and transverse colon. Clinical correlation for constipation is recommended.
